Montreal

Montreal, besides being the largest city, is the Commercial Metropolis of Canada, and has an unrivalled position on the St. Lawrence River. The large and handsome wharves are alive with shipping during the summer months, and steamers from all over the world carry on a huge import and export trade between Canada and foreign countries. The city, being the site of the principal banks, wholesale houses, and railways in the Dominion, exercises great influence throughout the country. The architecture is varied and fine, and is worthy of so great a city, and with important improvements and additions going on all the time, it is more than holding its own with any city in the New World
